Model Air

Acrylic colors developed especially for airbrush techniques, in a formula with very finely ground pigments and an acrylic resin with properties of extreme resistance and durability

Colores acrílicos desarrollados especialmente para el aerógrafo con pigmentos de molido extrafino y una resina acrílica de última generación de extrema resistencia y duración

EN Matt acrylic colors, water-based and especially formulated for airbrushing. The Model Air color range contains the most complete selection of the military colors used in recent history, including the colors of WWI, WWII and up to the present. Each color is based on extensive research by our experts on the existing and previous military references so as to offer the modeller the highest possible historical accuracy.

Model Air is used directly or diluted with Vallejo Airbrush Thinner or Flow Improver. It is recommended to prime the surface first and then apply Model Air in several layers. The colors dry very rapidly and form a homogenous paint film of extraordinary resistance while preserving even the smallest detail of the model. For airbrushing these colors, the compressor air pressure is recommended at 15 - 20 PSI or 0.5 to 1 kg. Model Air can of course also be applied with a brush. For correct airbrush maintenance we recommend using Airbrush Cleaner. Model Air is not flammable, and does not contain solvents.

Packaging:

Model Air is presented in bottles of 17 ml/0.57 fl oz with eyedropper. This packaging prevents the paint from evaporating and drying in the container, so that it can be used in minimal quantities and preserved for a long time.

ES Colores acrílicos mates, a base de agua, especialmente formulados para aerografía. Cada color ha sido rigurosamente desarrollado por nuestros expertos con el fin de ofrecer al modelista la máxima fidelidad histórica. La gama de Model Air contiene la más amplia selección de colores militares empleados tanto en vehículos como en aviones, desde conflictos de la Primera y Segunda Guerra Mundial, hasta nuestra era.

Los colores se pueden emplear directamente sobre la superficie, o bien diluidos con nuestro Airbrush Thinner o Flow Improver. Secan rápidamente y es recomendable aplicar sucesivas capas sobre una superficie previamente imprimada. Transcurridas unas horas tras su aplicación el color forma una película de extraordinaria resistencia sin alterar el más mínimo detalle del modelo. Se puede usar con pincel. Los ajustes recomendados para el uso del compresor rondan los 15 - 20 PSI o 0.5 a 1 kg. Para un correcto mantenimiento del aerógrafo recomendamos emplear Vallejo Airbrush Cleaner. Model Air no es inflamable y no contiene disolventes.

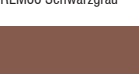

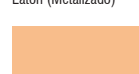

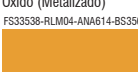

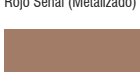

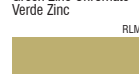

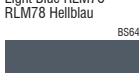

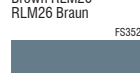

Presentación:

Model Air se presenta en botellas de 17 ml/0.57 fl oz con cuentagotas. Esta presentación evita la evaporación de la pintura y el secado dentro del frasco. Se pueden utilizar cantidades mínimas y conservar el contenido del frasco durante mucho tiempo.
